

Centos 安装文档

本文档用于引导用户在Centos环境安装GOD客户端。客户端的其他操作请参照[BitcoinGod教程](#)

依赖

```
yum install -y boost-devel qt-devel protobuf-devel qrencode-devel libevent-devel l
ibtool openssl-devel

wget http://download.oracle.com/berkeley-db/db-4.8.30.NC.tar.gz
tar -xzvf db-4.8.30.NC.tar.gz
cd db-4.8.30.NC/build_unix
../dist/configure --enable-cxx
make
sudo make install
```

编译

1. 下载bitcoingod源码并进入bitcoingod目录

```
git clone https://github.com/BitcoinGod/BitcoinGod.git
cd BitcoinGod
```

2. 编译Bitcoin God: 配置并编译Bitcoin God

```
binaries --without-gui
./autogen.sh
./configure --without-gui
make
make install
```

问题

在安装过程中可能出现以下问题。

1. configure过程出现的问题.
 - 问题描述

```
configure: error: C++ preprocessor "/lib/cpp" fails sanity
check See `config.log' for more details
```

- 解决方案

```
yum install glibc-headers
yum install gcc-c++
```
